

PV SERVICES FROM THE EXPERT

NEW: Services for manufacturers,
distributors and operators
of PV plants

We think solar.

Despite the use of reliable components problems can arise with PV plants. We help you recognize the reasons for yield losses, and offer advice on what you can do for a constant high system yield.

We guarantee cost efficient error diagnosis

Specially trained staff performs measurements with a thermal imaging camera

We use state-of-the-art technology for quick and reliable analysis of PV plants

Our service offer

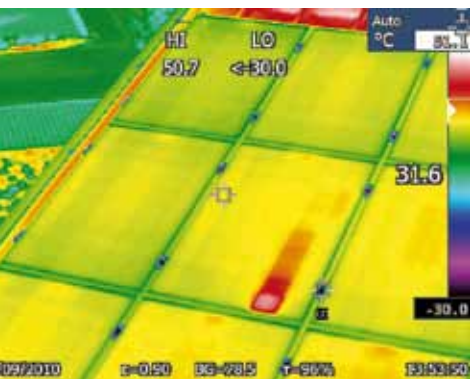

- Error analysis, quality and efficiency control of photovoltaic modules on roofs or in solar parks
- Coordination and operative handling of exchanges or claims
- Quick response time due to inventory in stock
- Logistics and deadlines coordination, stock and transport management, storage of new and used modules and their professional packaging
- Professional cleaning of solar modules

About soleg

„Energy from the Sun“ - behind this motto lies a clear goal for soleg: We want to make a decisive contribution to the complete transition of the energy supply to renewable sources. Since 1994, we have been planning and distributing installations and systems for the use of solar energy. We offer a broad range of services and extensive solar know-how for our partners from the trade, as well as architects, builders and investors.

Our business areas

- Distributor for photovoltaics
- EPC and turnkey provider of PV power plants
- Distributor for solar heating, wood-fired heating and Sonnenhaus technology
- Professional PV equipment and services

A typical defective spot on a PV module. A thermal imaging camera makes „hot spots“ visible
